1. Draw a second resonance structure for the given cation. Circle the more stable resonance form. 

(6 points)

2. Label the following planar compounds aromatic or antiaromatic. (4 points)

3. Name the following compound using either its common name or the IUPAC name. (4 points)

4. Fill in the blanks using a whole number from 1 to 10 (ex. 1, 2, 3, 4, etc.) (6 points)

1,3 Butadiene has \(4\) \(\pi\) molecular orbitals (bonding and antibonding). There are \(4\) \(\pi\) electrons in the system. The lowest \(2\) molecular orbital(s) is/are filled with electrons in the ground state.
For questions 5 to 16, write the major organic product formed in the following reactions. Pay attention to the stereochemistry and include the correct stereochemistry in the product if necessary. If you expect no reaction to occur, write NR. (4 points each)

For questions 17 to 19, provide reagents necessary to carry out the following transformations. More than one step is necessary. (4 points each)

17.

\[
\begin{align*}
\text{1. } & 
\text{HNO}_3 \quad \text{H}_2\text{SO}_4 \\
\text{2. } & \text{Br}_2, \text{FeBr}_3
